

***In The Specifications***

On page 11, please replace the paragraph beginning on line 13 as follows:

A software architecture for a Content Provider unit 102 is shown in fig. 7. The user interface 702 can be used to maintain information about Liaison units in a Liaison Store 704, and to maintain information about accounts and the bandwidth allocated to them in an Account ~~Store~~ Info 710, and to maintain specifications of content, including scheduling information, in a Catalog Store 706. Some content may be stored at the Content Provider unit in a Content Store 708. An interface 720 to Liaison units can be in the form of a CORBA client. This interface 720 can include an Exchange Account Info component 712 that communicates with Liaison units about accounts and their bandwidth allocation profiles, a Send Catalogs component 714 that sends content specifications and schedules to Liaison units, and a Send Content component 716 that delivers content to Liaison units. The Send Content component 716 may get the content from the local Content Store 708, or it may collect it from other locations 718 via FTP or some other suitable protocol.
